

Quick Start Guide

USB 3.0 Dual-Display Universal Docking Station

WAVLINK (@WavlinkOfficial)
WAVLINK SUPPORT (@WavlinkTechSupport)

WL-UG39DK4/WL-UG39DK4V

Download and install the latest drivers

System Requirements

- USB 3.0 or 2.0 Port (USB 3.0 recommended for optimal performance)
- Windows / Mac OS X

Recommended System Requirements for Playing 2K Videos

- 2 GHz Processor (or higher)
- 2 GB RAM (or higher)

Note: 64-bit Editions of XP are not supported. No Windows Server Editions are supported.

When Windows update isn't available, please visit <http://www.displaylink.com/support/downloads.php> and download the latest drivers. DisplayLink-provided drivers are always compatible with the USB Graphic adapter.

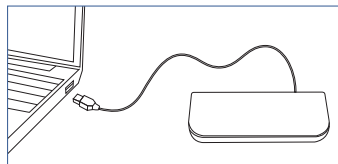

As part of major operating system updates (especially for Mac OS X), the most recent driver updates may be necessary. For drivers in beta, visit http://www.displaylink.com/support/mac_downloads.php

For Linux, DisplayLink provides open source libraries. Drivers are community written. Displaylink.org has details for advanced and adventurous users.

Hardware installation

Step 1

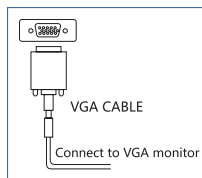

Connect the USB Type-B cable to the USB graphic adapter.

Plug in the USB cable to your PC or Notebook.

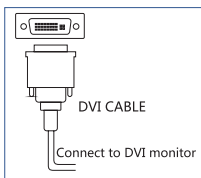

Please follow the right side instruction when you want to remove the device.

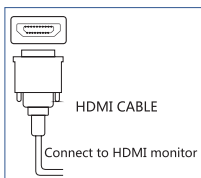

Step 2

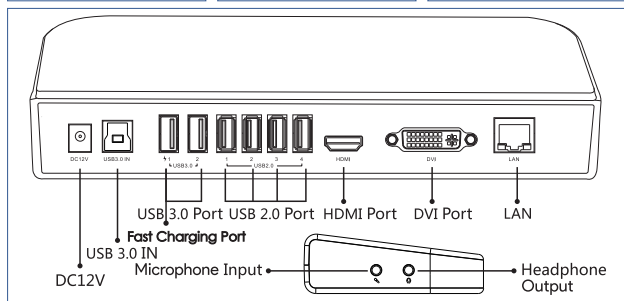

VGA CABLE
Connect to VGA monitor

DVI CABLE
Connect to DVI monitor

HDMI CABLE
Connect to HDMI monitor

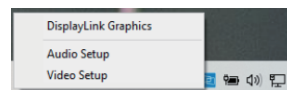

Select and attach the appropriate adapter for DVI, VGA or HDMI output. Connect the required video cable to the device.

Remark: "⚡" Fast Charging function is available when PC is on sleep mode or the device is disconnected to PC.

Driver installation

Follow the installation of software driver step by step until it's completed then reboot the system. PC will display the Displaylink icon and Ethernet LAN icon on the bottom right of your screen, as shown in the following pictures:

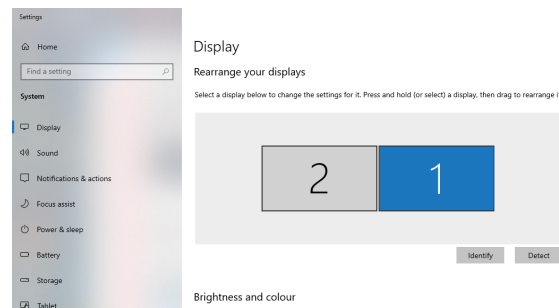

Displaylink Manager Icon

Ethernet Lan Icon

Right-click the Displaylink Manager icon to configure your screens and make sure the network connection is OK, then you can surf the internet

You can configure a UGA device through the Windows Display Propertier(WDP).
